

Overview

Move your business lines and calls from your current provider to **BtL** and cut your telecom costs. There is no physical change to your existing telephone lines, the only change is that **BtL** bills your line rental and you call **BtL** to report faults. One bill, one number to report faults to equals greater efficiency within your business. With an average yearly saving of 25% when you move your lines and calls to **BtL**, you can't lose.

Benefits

- One single bill for both your phone lines and calls.
- A fantastic yearly saving.
- A support helpline you can actually get through to.
- No change of numbers or BT services, such as diverts or call waiting.
- Lower cost line rental and calls.
- Hassle free - you don't need to do anything.

BtL's is extremely competitive in the market place for voice services. We can offer cost effective, simple, good quality voice services over IP or traditional ISDN and analogue lines.

VOIP

VOIP can either replace or complement your current ISDN, and is designed to work with leading IP PBX brands in the UK market.

Benefits of VOIP

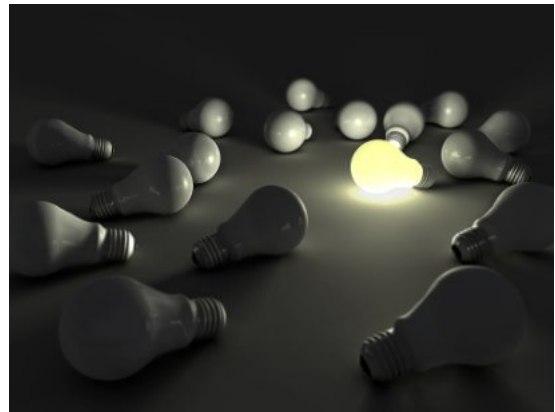

- FREE calls between your sites and lower cost calls overall compared to traditional telephony.
- Lower cost than ISDN, number presentation is included in the price, and DDI ranges are competitively priced.
- Scalable on a per channel basis unlike ISDN where you order in units of two.
- Easy to order and provision.

- Very flexible in terms of numbering. You can work from London on a Leeds number or vice versa. You can have 5 different geographical numbers on the same line to present a “UK wide” image without the overhead of different locations.
- Offers full emergency services support.
- Compliments a converged network with lower costs and simplified architecture.
- A full IP phone service – we provide the router, installation, IP connectivity, phone numbers, and on going service.

Ideal for Businesses:

- Looking to move premises out of the local area who want to keep the number without paying for expensive call forwarding type services.
- Companies looking to have disaster recovery measures in place where IP Direct Connect can back up ISDN, or vice-versa, to provide a resilient phone service to cope with any emergency.
- International businesses linking offices with IP Direct Connect and taking advantage of free internal calls from one office to another.
- Customer service driven businesses where a local presence is important across the UK and multiple UK numbers can be delivered into one single service centre.
