

Overview

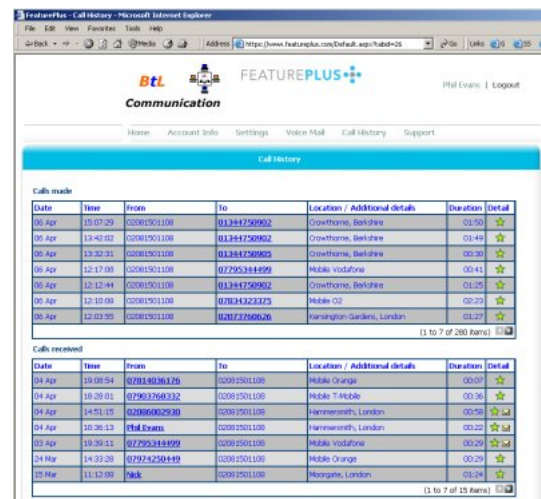

If you're ready to move your business communications into the 21st century, cut your costs and increase its functionality then read on.

The **BtL** FeaturePlus is an easy to use telephone service that enables you to make voice calls across any broadband connection using your existing phones. It offers reduced call costs and free site to site calls while providing a whole host of advanced calling features, which can improve productivity and make it easy for people to contact you.

The service is based around a simple yet powerful 2 or 8 port adaptor. Simply plug the adaptor plugs into an Internet Router, plug the phones into the adaptor and you're ready to go! There is no complicated configuration of your router or network to worry about!

Some of the key features of the service are;

- Any analogue phone – including cordless phones – can be used. A maximum of 2 and 8 phones can plug into each of the adaptors that are supplied with the service.
- Existing BT numbers can be transferred to this service
- New numbers can be allocated for ANY region in the country. For example, you could have an Edinburgh and a London number delivered on a single service to your office in Reading!
- Caller ID is included as standard. All that is required is a phone with Caller Display.
- Voicemail is included as standard. Notification of a waiting message can be almost any method imaginable – SMS (12p per SMS), a call to another number or email. Voicemail messages can be retrieved from any phone, delivered to another phone or emailed to a pre-defined email account as a wav file.
- Call History is available via the web interface. From the history you can 'Click to Dial' any number that you have called or has tried to call you.
- An address book allows easy access to regularly called numbers. Import and export functions allow the address book to be easily kept up to date with other applications.
- Extension numbers or 'Short Codes' can be assigned to any number in your address book. These short codes are completely flexible so it is possible to build a unique number plan for your company.
- Free calling between Feature-Plus lines, no matter where in the country they are, keeps costs down.

- Call Forwarding allows calls to a Feature-Plus line to forward to other numbers. Calls can also be set to ring several numbers at the same time, allowing a large degree of flexibility.
- Administrative controls allow a site or company supervisor to apply call barring to lines as required. Administrators can also limit access to configuration settings for staff as required.

Technically, the service is also much enhanced. The adaptor connects to the router and all PCs in the office are then connected to the Computer port on the adaptor. By passing all computer internet traffic through the adaptor the service ensures there is enough capacity on the internet for a telephone call at all times. This is shown graphically in the diagram below.

The bandwidth requirements are approximately 30 kb/s per phone. The service works comfortably with 4 phones on a single ADSL but if you don't expect everyone to be on the phone at the same time then 6 or 8 phone lines are ok.

Pricing is simple: Setup charges are £40 for each line plus one or more adaptors at £90 (2 port) or £215 (8 port). Rental charges are £8.95 per phone per month. Call charges are very attractive too; 0.99 pence per minute for local and national calls, and mobile rates are 9.95 pence per minute or less (excludes Three).
